REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The prior art fails to fairly teach what applicant has claimed. Joule-Thomson coolers are known. Examples of heat exchangers which are formed from stacked plates are cited on the 892. However there is no Joule-Thomson cooler with a heat exchanger formed of plates with an axial passage and channels which run approximately perpendicular to the axis, with the channels from one disk in fluid contact with the channels of the next. Channel is taken to mean a relatively narrow passage with most of the fluid progressing in a flow which generally follows the center line of the passage. Plate heat exchangers with the space between the plates generally open with flow between the plates passing perpendicular to an axis are known, but such relatively wide open spaces are not seen as channels.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William C. Doerrler whose telephone number is (571) 272-4807. The examiner can normally be reached on Monday-Friday 6:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cheryl Tyler can be reached on (571) 272-4834. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
